Plate Stacker Drop-Ins

Plate Stacker Drop-ins are available in heated and unheated models to handle plates/saucers from 130 to 305 diameter. Unheated Drop-ins can be supplied with a stainless steel casing when they are to be used in an open type trolley. Adjustment of the self levelling mechanism is done by adding or removing some zinc plated steel springs.

Heated Drop-ins are fitted with a 230 volt 250 watt heating element, indicating light, thermostat and a stainless steel outer casing.
