Mobile Plate Stacker Cabinets

Mobile Plate stacker Cabinets are available heated and unheated to take standard unheated drop-ins. Drop-ins lift out for cleaning.

Heated cabinets have a stainless steel outer skin, fibreglass insulation and galvanised sheet steel inner casing. Cabinet type units are available as single or double units with 250 watt heating element(s) thermostat and indicating light all mounted in a recessed housing. Castors on mobile units are 125 diameter ball bearing wheels for ease of movement and 2 castors have brakes.

Unheated cabinets similar to the heated units without the insulation, inner skin, and electrics.
